APPLIED AI & SYSTEMS INTEGRATION · SINCE 1989

AI that reaches into the systems it was never meant to touch.

PLUGS TECHNOLOGY, INC.

THE PROBLEM

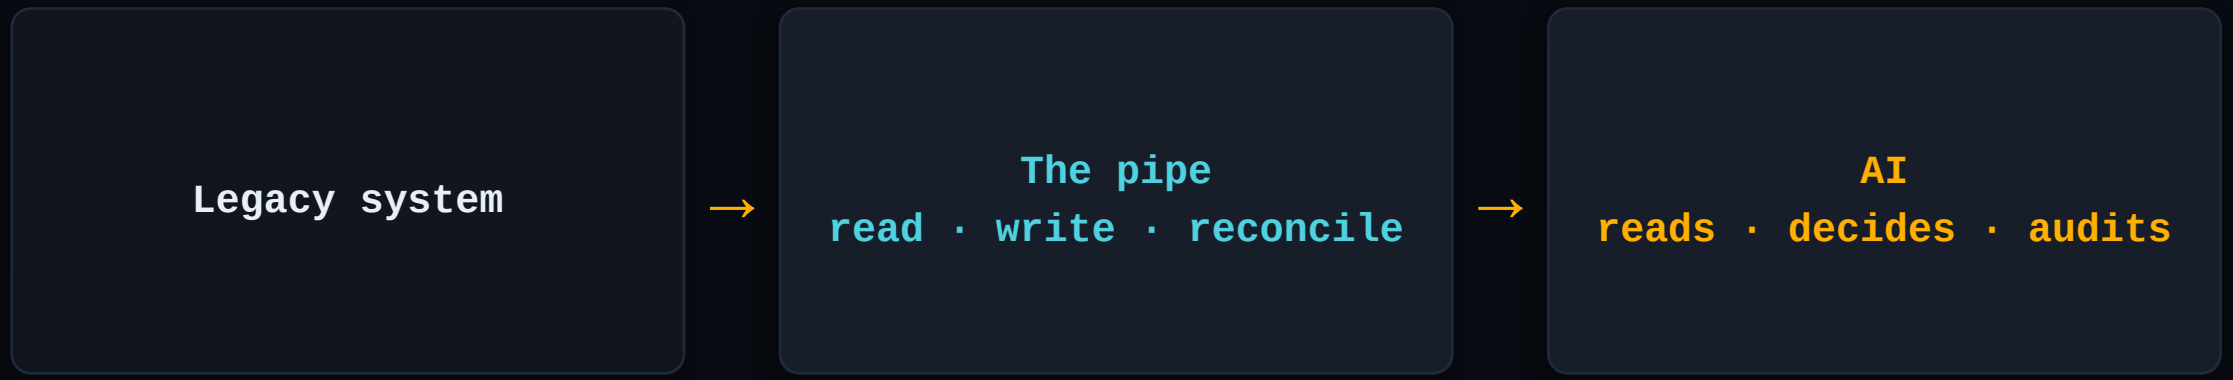

Your most important systems have no API.

Your ERP was built for a human with a mouse. The terminal screen is older than the internet. The data you need is trapped inside systems nobody is going to replace.

WHAT WE DO

We get the data out — and key it back in.

For 35 years we have pried open systems that fight back. Now the AI goes on the far end of that pipe: it reads, decides, and acts on data no one else can reach.

WHY US

AI you can trust on systems that cannot fail.

01

Through the glass

We read the system the way your best employee does — business rules intact.

02

Hands off the data

We never touch the files underneath. We go through the front door, like a person.

03

It compounds

Every correction becomes a permanent rule. It gets more correct every week.

04

It shows its work

The AI audits itself, with a reason for every decision. A human signs off.

WHAT WE SOLVE

Four problems. One brain.

Document AI

A machine that reads a page, assembles the packet, and audits its own work.

ERP wrapping

Read live state out, key transactions back in, reconcile. No core changes.

Healthcare

HL7, Master Patient Index, imaging — systems that cannot go down.

Logistics & customs

ISF filings, C-TPAT, container & B/L matching, portals watched 24/7.

…plus legacy Windows applications re-platformed to LAMP.

TRACK RECORD

35+ years prying systems open.

1989	1997	1999	~2000	Today
IBM mainframe · CICS	A customs broker · 28-year client	Hampton Jitney · web ↔ midrange	Riverhead Building Supply · AS/400	Nassau University Medical Center · AI

Government. Military. Hospitals. Still shipping.
